

ABSTRACT OF THE DISCLOSURE

An improved Brasil Slingo™-type game for a wagering gaming device. The game enables the player to select an amount of masked symbols prior to the generation the symbols by generation devices
5 associated with the masked symbols. When the symbols selected by the player match symbols generated by the generation devices, the game enables a bonus game or award generation apparatus. In one embodiment, the apparatus is electromechanical. The payer's overall award is a combination of the output of the bonus game or apparatus
10 and the base Slingo™ game.
